To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:

- a) ☐ The period for reply expires _____ months from the mailing date of the final rejection.
 b) ☒ The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.

Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).

Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

2. ☐ The Notice of Appeal was filed on _____. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal.  SUPERVISORY PATENT EXAMINER

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Fenty does not teach transfer pieces, but Fenty teaches the assembly of 58,60, and 62 which provides a support surface for the products (C3 L49-54). Applicant further argues that Lago does not teach use of an inside chain and features related to a multiple chain drive system, but Lago teaches a chain conveyor comprises a first and second endless chains formed by interlinked annular guides defining (C1 L21-25) and toothed wheels generally engage tangentially and underneath the chain (C1 L34-36). The applicant never distinguishes between horizontal or vertical in the recited claims, but does agree that Lago teaches horizontally toothed driving wheel engages in the inner side of the chain. In addition, Applicant claims that Lago does not teach the use of inside and outside sprockets, but Lago teaches a toothed wheel engaging the inner side of the chain as well a single toothed wheel is used on the outer side of the chain of the belt (C2 L9-10). Claim 1 was rejected with the reference Killen for the teachings of a speed change gear drive. Although Killen teaches an apparatus to convey bottles vertically, but it is the teachings of the conventional variable speed input drive (C4 L15-16). Killen also teaches multiple chain drive system driven by sprockets along the chain (C4 L18-25). Between the three inventions recited, the applicant claims have been shown and with an understanding to combine. The combination of Lago and Killen allows the conveyor of Fenty to be accessible for adjustments with various operating speeds and the reduction of noise and vibrations through the use of a multiple chain system. For the recited reasons, claims 13-19 stand rejected.
